Dear Daniel Cieplowski,

I am applying for the IT Product Owner role for the Finance Forecasting Hub. I am Head of Product and co-founder of Rehabilia Technologies and an R&D engineer with more than five years at CNR-STIIMA, the Italian National Research Council. My work is to turn the unclear needs of demanding expert users into products that are built, validated and used.

At Rehabilia I own the product from discovery to delivery. I frame the problem with clinicians and patients, set requirements and priorities, decide trade-offs with engineering and design, and validate each iteration with users. Our device, PhiCube, reached a usability score of 85.8/100 (SUS) with 19 children and is now in two ongoing multicentre studies with 134 patients. Getting there meant aligning clinicians, engineers, research partners and funders around the same priorities.

I use prototypes and MVPs to learn early. At CNR-STIIMA I have taken more than three functional prototypes from concept to experimental validation, and at a hardware challenge at LMU Munich my team built a working rehabilitation device in 24 hours, with a TensorFlow Lite classifier running on a microcontroller.

I can also discuss solutions with data and AI teams in their own terms. For my PhD project, OmniTrack, I built the system end to end and analysed in Python the data from experiments with 16 blind participants. I have built embedded machine-learning classifiers, and I hold Anthropic's Claude and Claude Code certifications and use these tools in my development work, so I know both what such models can do and where they need a human in the loop.

Finance is a new domain for me. What I bring is the habit of learning a specialist domain quickly alongside its experts, as I did with clinicians, and of asking which outcome a feature should change before it is built.

I would welcome the chance to discuss the role further.

Yours sincerely,

Giovanni Tauro
