Product Design Hiring Team
Revolut

October 12, 2026

Dear Hiring Team,

I am applying for the Platform Product Designer role. I am a designer and engineer (MSc in Design & Engineering, Politecnico di Milano) with more than five years designing complex systems for expert users, at CNR-STIIMA, the Italian National Research Council, and as Head of Product and co-founder of Rehabilia Technologies.

The users I design for are operational ones: therapists and researchers who rely on a tool to get their daily work done. I designed the interface of PhiCube, a rehabilitation device, together with Italian clinics, to simplify how therapists configure hardware and software; it reached a usability score of 85.8/100 (SUS) with 19 children and is now in two ongoing multicentre studies with 134 patients.

I am comfortable with dense data and edge cases. For my PhD project, OmniTrack, I designed and built OmniAnalytics, a web dashboard for researchers with session browsing, synchronised time-series charts, trajectory playback and comparison tables. Much of the design work was in the exceptions: flows to correct missing or wrong sensor data, to exclude a trial or to relabel a session, without ever altering the raw records.

I think in systems and I can code. For OmniTrack I mapped the states, feedback logic and interactions across several devices, and I prototype in React and Python, so I understand backend-driven workflows and can test an idea with engineers early.

My process goes from research to flows, prototypes and usability tests, and as Head of Product I own it end to end, setting priorities with engineering and clinical teams. My products so far serve healthcare and research rather than finance, and at a smaller scale than Revolut's; the problems of fragmented workflows and demanding operational users are the ones I know. Examples of this work are in the portfolio linked above.

I would welcome the chance to discuss the role further.

Yours faithfully,

Giovanni Tauro
