October 14, 2026

Dear Hiring Team,

I am applying for the Lead Specialist, Experience Designer role (Req. 25428). I am a designer and engineer (MSc in Design & Engineering, Politecnico di Milano) with more than five years making complex technical systems usable for the people who have to rely on them, at CNR-STIIMA, the Italian National Research Council, and as Head of Product and co-founder of Rehabilia Technologies.

The challenge you describe for Project Cookie, a front door that takes people from idea to deployment without exposing the machinery underneath, is the one I work on daily. I designed the interface of PhiCube, a rehabilitation device, together with Italian clinics, so that therapists could configure hardware and software without needing to understand them; it reached a usability score of 85.8/100 (SUS) with 19 children and is now in two multicentre studies with 134 patients.

I am at ease with dense, governed data. For my PhD project, OmniTrack, I designed and built OmniAnalytics, a web dashboard where researchers browse, compare and replay sessions. Much of the design went into the rules: flows to correct, exclude or relabel data while the raw records stay untouched, which is close to how an AI Inventory or a Semantic Layer must stay both open and trustworthy.

On AI, I co-authored research on socially interactive agents for robotic rehabilitation (Frontiers in Artificial Intelligence, 2024), I have built an embedded machine-learning classifier (TensorFlow Lite) into a prototype, and I prototype daily with Claude and Claude Code. I also code in React and Python, so I can test an idea with engineers early. Accessibility runs through my work, from OmniTrack, validated with 16 blind participants, to a game for children with cerebral palsy.

As Head of Product I own the process end to end and align engineering, clinical and business stakeholders on priorities and trade-offs. My work so far has been in healthcare and research rather than enterprise platforms; the problem of turning complexity into something people adopt and trust is the same. Examples are in the portfolio linked above.

I would welcome the chance to discuss the role further.

Yours faithfully,

Giovanni Tauro
