Dear Hiring Team,

I am applying for the Product Manager – AI & 3D role at CGTrader. I am Head of Product and co-founder of Rehabilia Technologies, and for more than five years I have designed and prototyped products at CNR-STIIMA, the Italian National Research Council. The role asks for someone who takes ideas from ambiguity through prototypes to launch and who uses AI tools every day; that is how I already work, and 3D has been part of my work since my industrial design degree.

At Rehabilia I own the product from discovery to delivery. I interview users and partners, frame the problem, write the requirements and decide what goes into a prototype, an MVP or a later iteration, with a milestone-based roadmap. Our device, PhiCube, reached a usability score of 85.8/100 (SUS) with 19 children and is now in two ongoing multicentre studies with 134 patients. That work taught me to turn a complex system into something its users find simple, and to check it with real people before scaling it.

Claude is part of my everyday work: I use Claude and Claude Code to explore ideas, build coded prototypes and analyse data, and I hold Anthropic's certifications for both. On the 3D side, I have modelled products in SolidWorks and Fusion 360 and built them with 3D printing and 3D scanning, and at CNR-STIIMA I created and optimised Blender and Unity assets for a driving simulator, published at ICCHP 2022 (Springer), and a VR wheelchair simulator. So I know first-hand where 3D workflows are slow (modelling, cleanup, texturing, optimisation, preparing a file for print) and where generative AI could help.

I have not yet worked on a marketplace or a consumer creative tool, and my users so far have been clinicians, researchers and partners. What I bring is the habit of learning a new domain from its users, prototyping quickly and deciding with evidence what to build next. My portfolio and GrabCAD models are linked above.

I would welcome the chance to discuss the role further.

Sincerely,

Giovanni Tauro
