Dear Ethos Team,

I am applying for the Product Researcher opportunity to help train a language model on research documents, spreadsheets and slide decks. I am Head of Product and co-founder of Rehabilia Technologies, and for more than five years I have run customer and user research at CNR-STIIMA, the Italian National Research Council. Judging whether a findings deck or an interview synthesis actually helps a team decide is part of my daily work, so I would enjoy doing it for AI-generated ones.

I own studies from start to finish. I write the study protocol, run interviews and usability tests, collect questionnaire data, analyse it and turn it into findings that a team can act on. I have run studies with 16 blind participants for an indoor navigation system and with children with cerebral palsy for a rehabilitation game, which we published as a usability and acceptability pilot study in the *Italian Journal of Pediatrics*. At Rehabilia, I lead discovery interviews with clinicians, patients and partners and ongoing field research with clinics, and I synthesise what I hear into problem statements, journey maps and product recommendations. Our device PhiCube reached a usability score of 85.8/100 (SUS) with 19 children, and in the preliminary results of a multicentre study across six Italian clinics, 55 children aged 4 to 17 rated every usability and acceptability item above 4 out of 5.

Most of my output is written: study protocols, reports, papers and presentations for clinicians, partners and funders, so I care about clear structure and precise wording. I also use Claude and Claude Code every day to draft, analyse and structure documents, and I hold Anthropic's certifications for both, so I know where model output tends to look polished but miss the point.

My research has been in healthcare and assistive technology rather than commercial software, and I have used standardised questionnaires more than custom survey instruments. The core skills are the same: planning a study, listening carefully and turning raw data into conclusions people can trust.

I am available to work 5 to 20 hours per week, remotely and on a flexible schedule, and I would welcome the chance to contribute.

Sincerely,

Giovanni Tauro
