Hiring Team
Product Manager, Dental

October 27, 2026

Dear Hiring Team,

I am applying for the Product Manager role for your dental product line. I am Head of Product and co-founder of Rehabilia Technologies, and for more than five years I have developed medical devices at CNR-STIIMA, the Italian National Research Council.

Dentistry is where my product work began. For my MSc thesis at Politecnico di Milano I designed WashB, an ultrasonic teeth-cleaning device. I started from research on brushing, flossing, materials and people's oral-care habits, which pointed to ultrasound as a way to remove biofilm in areas that brushing and flossing miss. The device had to work regardless of the user's manual dexterity and adapt to different dental arch shapes, and I chose its materials and optimised the shape of its functional components.

Since then I have taken a regulated device from concept to clinic. PhiCube, a rehabilitation device of which I am co-inventor (WO2023214349A1), went from interviews with clinicians and hardware/software requirements to deployment in Italian clinics, under MDR, ISO 13485 and IEC 60601. I contributed to its CE-oriented technical files, manuals and design dossiers, turning regulatory requirements into design inputs. PhiCube reached a usability score of 85.8/100 (SUS) with 19 children and is now in two ongoing multicentre studies with 134 patients.

As Head of Product I run field research with clinics on their pain points, the tools they use and how they make purchasing decisions, and turn it into requirements, a prioritised backlog and a milestone-based roadmap. I align engineers, clinicians, research partners and suppliers on scope, timelines and trade-offs, and I base decisions on usability tests and study data. In the EIT Health MedTech and EIT Wildcards bootcamps I worked on our business and financial plan, and I regularly present the product to clinicians, partners and support programmes.

My regulatory experience is with the EU MDR rather than the FDA, and I have not yet launched a product through a sales organisation or worked with distributors and DSOs. These are the areas where I would expect to learn the most in my first months. I am used to 3D scanning and CAD workflows from my earlier work, which should help with digital dentistry, and I am happy to travel.

I would welcome the chance to discuss the role further.

Sincerely,

Giovanni Tauro
